Cleanup	32

Objective

To perform sample integration of Azure Dev Ops and Jenkins

Architecture Design

Please see below diagram a sample case to test integration of Azure Dev Ops, Kubernetes, Jenkins, Maven, and Selenium:

Azure Dev Ops Initializes Selenium hub and Selenium Chrome and Firefox Nodes via MicroK8s Kubernetes. Selenium Hub grid console contains 2 Firefox Nodes and 2 Chrome Nodes. Each node has test cases. After Azure Dev Ops completed the initialization successfully, it will trigger Jenkins Selenium Kubernetes Maven Project to execute test cases for each node. If the test cases are successful, each will display the title page of the URL. Test results are published in index.html and emailable-report.html using Maven-Surefire Plugin. The reports can be shown in Jenkins job by clicking HTML report.

Specifications

- Windows 10 OS Home Edition version 22H2
- WSL2 Ubuntu version 22.04
- Azure DevOps Free = Self-hosted (SelfHostedWSL), project: TestRonProject
- Microk8s v1.27.2 revision 5372
- Github = <https://github.com/ronslim/dockerjenkins>
- Localtunnel link: <https://ronjenkins.loca.lt>
- Jenkins (version 2.410) in WSL2
- Eclipse IDE for Java Developers version 2023-06 (4.28.0) for creating Selenium Maven Project
- Maven version 3.9.2

Pre-requisites

- WSL Ubuntu 22.04 packages
 - npm (For installing Localtunnel)
 - Localtunnel (install using npm)
 - Jenkins.war = For installing and running Jenkins
 - Microk8s snaps
 - java
 - openjdk version "11.0.19" 2023-04-18
 - OpenJDK Runtime Environment (build 11.0.19+7-post-Ubuntu-0ubuntu122.04.1)
 - OpenJDK 64-Bit Server VM (build 11.0.19+7-post-Ubuntu-0ubuntu122.04.1, mixed mode, sharing)
 - Eclipse IDE for Java Developers for creating Selenium Maven Project
 - Maven version 3.9.2

Initializations

1. Jenkins in WSL2

```
ron@DESKTOP-JLEGGJC:/mnt/d/Jenkins$ java -Dhudson.model.DirectoryBrowserSupport.CSP="" -jar jenkins.war
Running from: /mnt/d/Jenkins/jenkins.war
webroot: /mnt/d/Jenkins/.jenkins/war
2023-07-08 03:48:41.667+0000 [id=1] INFO winstone.Logger#logInternal: Beginning extraction from war file

```

2. Localtunnel in WSL2

Note: Please use your own subdomain and not mine

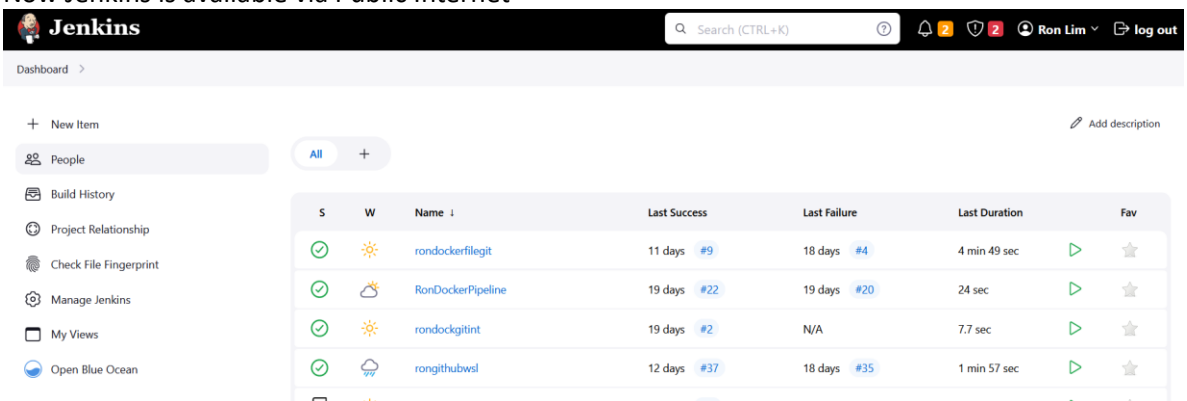

```
root@DESKTOP-3LEGGJC:/mnt/d/localtunnelserver/server# lt --port 8080 --subdomain mydomain
your url is: https://mydomain.local.lt
```

Note, if there is a need to initialize, get your Public IP Address at <https://ipv4.icanhazip.com/> and put that on Endpoint IP

Fill-out the Endpoint IP in the main website and use the retrieved Public IP as Endpoint IP. Then click "Click to Submit".

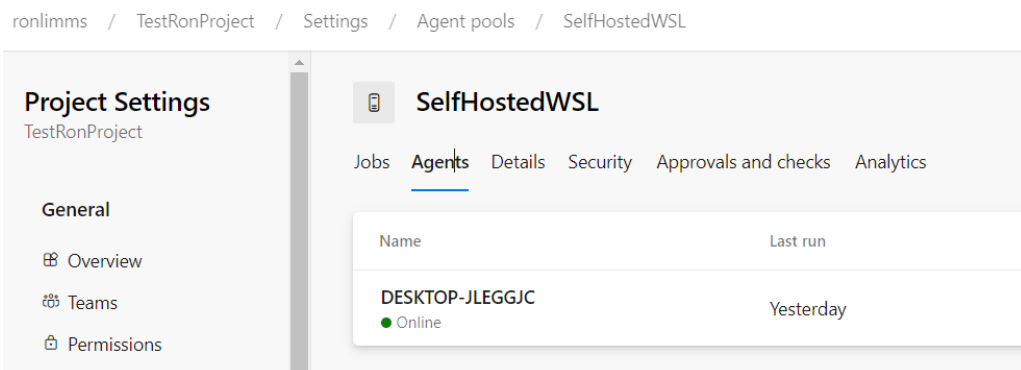

Now Jenkins is available via Public Internet

3. Azure DevOps Self-Hosted

```
ron@DESKTOP-JLEGGJC:/mnt/d/AzureDevOps/wslagent$ ./run.sh
Scanning for tool capabilities.
Connecting to the server.
2023-07-08 04:08:13Z: Listening for Jobs
```

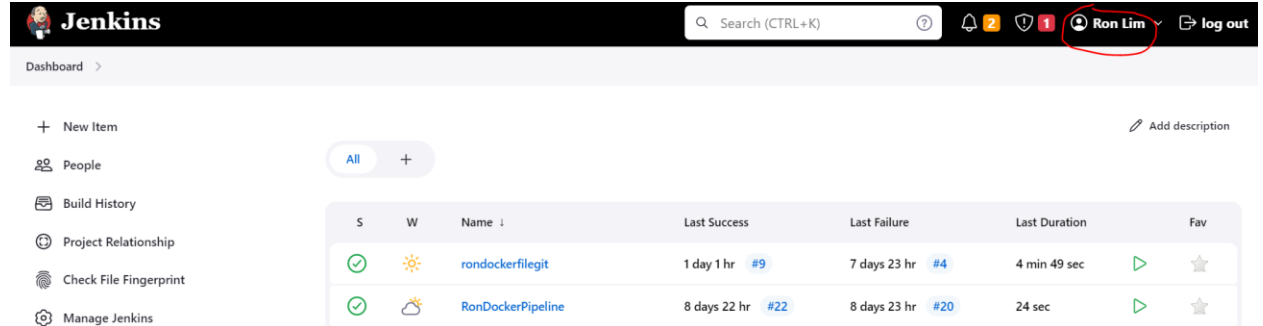

Verify in Azure DevOps Agent Pool in Agent tab that Self-hosted agent is online

Additional Setup

1. Jenkins API Token for Azure DevOps

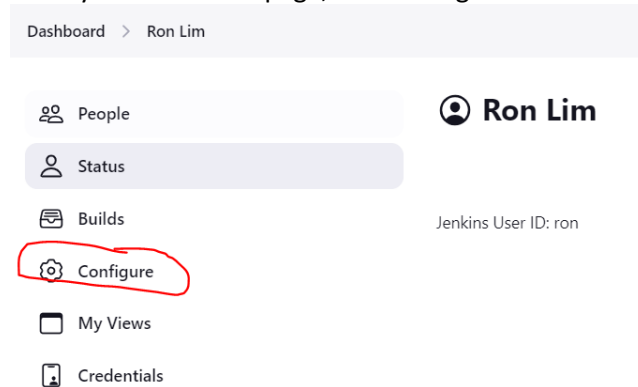

Click your username, it will go to your main user page

The screenshot shows the Jenkins Dashboard. At the top right, the user 'Ron Lim' is logged in, indicated by a dropdown menu. The dashboard includes a sidebar with navigation options like 'New Item', 'People', 'Build History', 'Project Relationship', 'Check File Fingerprint', and 'Manage Jenkins'. The main area displays a table of build jobs. The table has columns for 'S' (status), 'W' (weather icon), 'Name', 'Last Success', 'Last Failure', 'Last Duration', and 'Fav'. Two jobs are listed: 'rondockerfilegit' and 'RonDockerPipeline'.

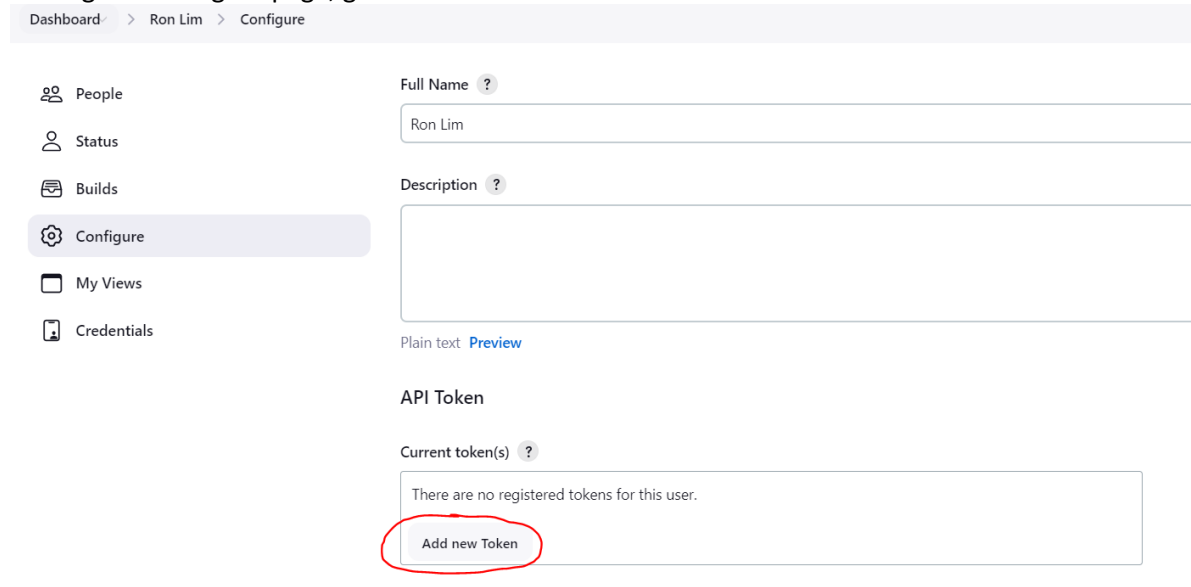

S	W	Name	Last Success	Last Failure	Last Duration	Fav
✓	☀	rondockerfilegit	1 day 1 hr #9	7 days 23 hr #4	4 min 49 sec	▶ ☆
✓	☁	RonDockerPipeline	8 days 22 hr #22	8 days 23 hr #20	24 sec	▶ ☆

From your main user page, click Configure

The screenshot shows the Jenkins User Configuration page for 'Ron Lim'. The left sidebar contains options: 'People', 'Status', 'Builds', 'Configure' (highlighted with a red circle), 'My Views', and 'Credentials'. The main area shows the user's profile and the 'Jenkins User ID: ron'.

It will go to Configure page, go to the API Token section and click Add New Token

The screenshot shows the Jenkins API Token configuration page. The left sidebar is the same as the previous page, with 'Configure' highlighted. The main area has fields for 'Full Name' (Ron Lim) and 'Description'. Below these is the 'API Token' section, which includes a 'Current token(s)' field and an 'Add new Token' button (highlighted with a red circle). The 'Current token(s)' field contains the text: 'There are no registered tokens for this user.'

Then specify token name and click Generate, it will generate the password

Current token(s) ?

There are no registered tokens for this user.

Please save the password on the right side as this password is no longer visible afterwards. After saving password, click Save to save changes on new API Token

Current token(s) ?

⚠ Copy this token now, because it cannot be recover

Build/Implementation

1. Eclipse Selenium Project

Need to Specify a new Workspace folder.

Create a Maven Project

New Maven Project

New Maven project

    @Test
    public void test4() throws MalformedURLException
    {
        FirefoxOptions cap = new FirefoxOptions();
        cap.setCapability(CapabilityType.UNEXPECTED_ALERT_BEHAVIOUR,
            UnexpectedAlertBehaviour.DISMISS);

        RemoteWebDriver driver = new RemoteWebDriver(new
URL("<DesiredSubdomain>.local:4444/wd/hub"),cap);
        driver.manage().timeouts().implicitlyWait(180, TimeUnit.SECONDS);
        driver.get("http://instagram.com");
        System.out.println("Firefox Title = " + driver.getTitle());

        driver.quit();
    }
}
```

2. Jenkins Build

Now that the Jenkinsfile is available, we can start the build on Jenkins. On Jenkins Dashboard, click + New Item

Enter a name. I entered ronseleniumkubernetesmavenproj and choose Maven Project and click OK

Enter an item name

ronseleniumkubernetesmavenproj

» Required field

- Freestyle project**
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.
- Maven project**
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.
- Pipeline**
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- Multi-configuration project**
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

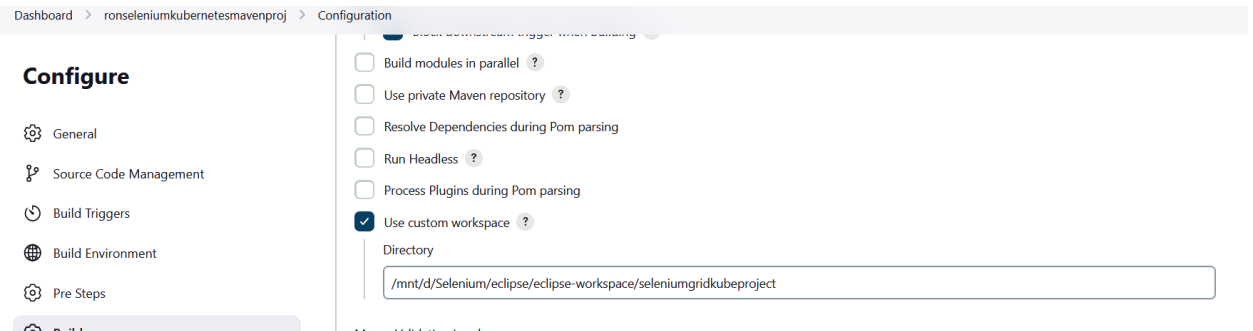

OK

In Source Code Management Section, choose None

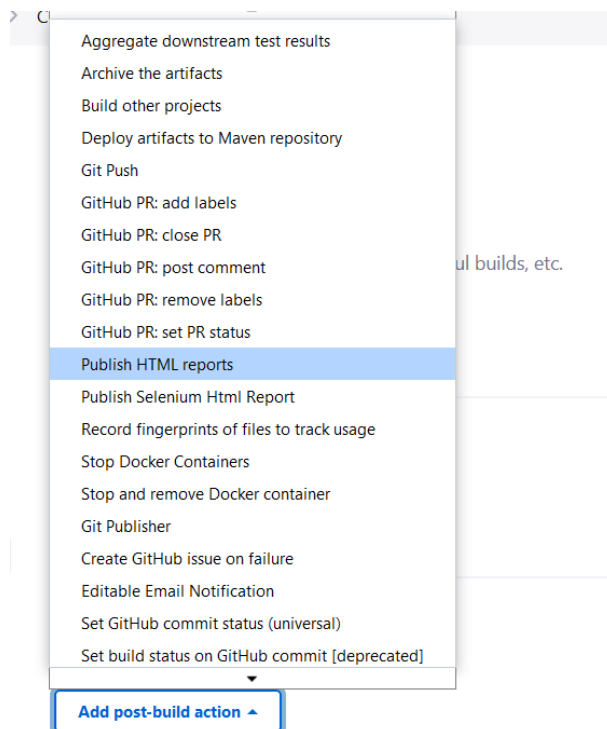

Source Code Management

- ☒ None
- ☐ Git ?

For the Build Part, click Advanced to expand Advanced section and check “Use Custom Workspace” then specify your eclipse workspace with project folder and not the Jenkins project folder. The folder I used is from D drive but in case of WSL, it is /mnt/d/...

Go to Post-build Actions and add Publish HTML reports

Publish html report:

Html directory to archive = target/surefire-reports

Index Page(s): index.html,emailable-report.html

Publish HTML reports ? ✕

Reports

HTML directory to archive ? ✕

target/surefire-reports

Index page[s] ?

index.html,emailable-report.html

Index page title[s] (Optional) ?

The optional title(s) for the report files, which will be used as the tab names. If this is not provided, file names will be used instead.
(from [HTML Publisher plugin](#))

Report title ?

HTML Report

Then click Publishing Options and check Allow Missing Reports so that even if the report is not existing, build will still be successful.

Publishing options ^ ✎ Edited

☐ Keep past HTML reports ?
☐ Always link to last build ?
☒ Allow missing report ?

Include files
Follows the Ant glob syntax, such as `**/*.html,**/*.css`

`**/*`

☒ Escape underscores in Report Title ?
☒ Use the legacy wrapper file ?

After saving, it will automatically run the Scan Repository and go to project main page

Dashboard > ronseleniumkubernetesmavenproj >

Maven project ronseleniumkubernetesmavenproj

✎ Add description

Disable Project

3. Azure DevOps Build

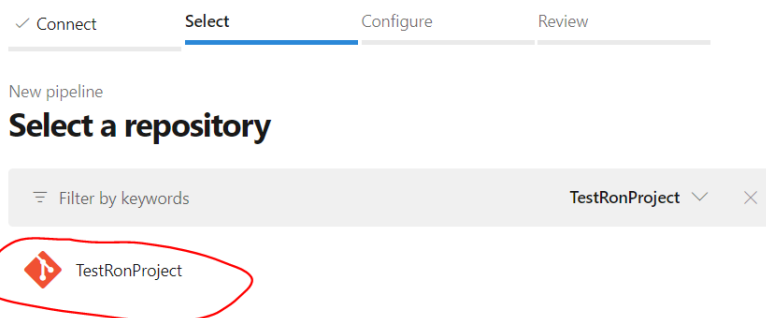

Go to Pipelines and click New Pipeline

Choose Azure Repos Git

Click the Repository or choose a repository

Click Starter pipeline as we will only use sample build to test integration between Azure DevOps and Jenkins

✓ Connect

✓ Select

Configure

Review

New pipeline

Configure your pipeline

Docker

Build a Docker image

Docker

Build and push an image to Azure Container Registry

Deploy to Azure Kubernetes Service

Build and push image to Azure Container Registry; Deploy to Azure Kubernetes Service

Starter pipeline

Start with a minimal pipeline that you can customize to build and deploy your code.

Existing Azure Pipelines YAML file

Select an Azure Pipelines YAML file in any branch of the repository.

Show more

Since we will use the self-hosted agent, we need to change the pool section

Initial:

New pipeline

Review your pipeline YAML

TestRunProject / azure-pipelines-2.yml * ⌵

```

1  # Starter pipeline
2  # Start with a minimal pipeline that you can customize to build and deploy your code.
3  # Add steps that build, run tests, deploy, and more:
4  # https://aka.ms/yaml
5
6  trigger:
7  - main
8
9  pool:
10 - vmImage: ubuntu-latest
11
12 steps:
13 - script: echo Hello, world!
14   displayName: 'Run a one-line script'
15
16 - script: |
17   echo Add other tasks to build, test, and deploy your project.
18   echo See https://aka.ms/yaml
19   displayName: 'Run a multi-line script'
20

```

Modified to use self-hosted. Then modify the YAML file like below to initialize the Kubernetes needed using microk8s.

```

# Starter pipeline
# Start with a minimal pipeline that you can customize to build and deploy
your code.
# Add steps that build, run tests, deploy, and more:
# https://aka.ms/yaml

trigger:
- main

pool:
  name: SelfHostedWSL

steps:
- script: echo Hello, world!
  displayName: 'Run a one-line script'

- task: CmdLine@2
  inputs:
    script: |
      echo Start Initializing Selenium Hub and Firefox and Google Chrome N
ode Grids

```

```

    microk8s.kubectl create deployment selenium-hub --
image selenium/hub:3.9.0 --port 4444
    microk8s.kubectl expose deployment selenium-hub --type=ClusterIP
    microk8s.kubectl create deployment selenium-node-chrome --
image selenium/node-chrome:3.9.1
    microk8s.kubectl expose deployment selenium-node-chrome --
type=ClusterIP --port 4444
    microk8s.kubectl set env deployment/selenium-node-chrome --
env="HUB_PORT_4444_TCP_ADDR=selenium-hub" --
env="HUB_PORT_4444_TCP_PORT=4444"
    microk8s.kubectl create deployment selenium-node-firefox --
image selenium/node-firefox:3.9.1
    microk8s.kubectl expose deployment selenium-node-firefox --
type=ClusterIP --port 4444
    microk8s.kubectl set env deployment/selenium-node-firefox --
env="HUB_PORT_4444_TCP_ADDR=selenium-hub" --
env="HUB_PORT_4444_TCP_PORT=4444"
    microk8s.kubectl scale deployment --replicas 2 selenium-node-chrome
    microk8s.kubectl scale deployment --replicas 2 selenium-node-firefox
    sleep 180

```

Click Save and run

Save and run ×

Saving will commit azure-pipelines-2.yml to the repository.

Commit message

Set up CI with Azure Pipelines

Optional extended description

Add an optional description...

☒ Commit directly to the main branch

☐ Create a new branch for this commit

Save and run

Let it run to test that the job is working as expected. Then execute below in WSL2 to delete the initialized Kubernetes.

```
microk8s.kubectl delete service selenium-node-chrome
microk8s.kubectl delete service selenium-node-firefox
microk8s.kubectl delete service selenium-hub
microk8s.kubectl delete deployment selenium-node-chrome
microk8s.kubectl delete deployment selenium-node-firefox
microk8s.kubectl delete deployment selenium-hub
```

4. Auto trigger Jenkins build job using Azure DevOps Service Hook

Since both Azure DevOps job, Jenkins Build job, and Eclipse Selenium Maven Project are created, we can automate that after the successful build of Azure DevOps, it will execute the Jenkins Build Job using Service Hook

In Azure DevOps Project Settings, click Service hooks

Project Settings

Queued

Then click while running, check immediately the progress at least for selenium-hub Kubernetes as we need immediately the pod ip address of selenium-hub to initialize the local-host parameter of localtunnel during run as this will be used by Jenkins job.

Command for monitoring:

microk8s.kubect! get all -o wide or microk8s.kubect! get pods -o wide

NAME	READY	STATUS	RESTARTS	AGE	IP	NODE	NOMINATED NODE	READING
pod/selenium-node-chrome-6d7744fc5-cbzx5	0/1	ContainerCreating	0	42s	<none>	desktop-jleggjc	<none>	<none>
pod/selenium-node-firefox-5985456478-9fw9t	0/1	Pending	0	22s	<none>	desktop-jleggjc	<none>	<none>
pod/selenium-node-chrome-85f9b9d4b8-94q4n	0/1	ContainerCreating	0	24s	<none>	desktop-jleggjc	<none>	<none>
pod/selenium-hub-56696b9ddc-k4xgv	1/1	Running	0	55s	10.1.138.101	desktop-jleggjc	<none>	<none>

Format of localtunnel:

lt --port 4444 --subdomain <Desired Subdomain> --local-host <IP Address of Selenium-hub>

Sample:

```
ron@DESKTOP-JLEGGJC:/mnt/d/Jenkins$ lt --port 4444 --subdomain ronk15 --local-host 10.1.138.101
your url is: https://ronk15.loca.lt
```

Then after initialization, continue monitoring until success

 #20230708.5 • Update azure-pipelines.yml for Azure Pipelines Run new

 SeleniumKubernetesInitialization

 This run is being retained as one of 3 recent runs by main (Branch). View retention leases

Sample grid console = To check if nodes are associated and running

The screenshot displays the Selenium Grid Console v.3.9.0 interface. It features a dark blue header with the Selenium logo and the title 'Grid Console v.3.9.0'. Below the header, there are four panels, each representing a node in the grid. Each panel has a 'DefaultRemoteProxy (version : 3.9.1)' header and a 'Browsers' section. The first two panels show 'v:64.0.3282.140' and the last two show 'v:58.0.1'. A 'view config' link is visible at the bottom left.

URL: <localtunnel URL>/grid/console

Cleanup

- Terminate localtunnel for Jenkins and Selenium Grid by Ctrl + C.
- Terminate Jenkins.war by Ctrl + C.
- Terminate Azure Dev Ops Agent by Ctrl + C.
- Delete all deployed Kubernetes

```
microk8s.kubectl delete service selenium-node-chrome
microk8s.kubectl delete service selenium-node-firefox
microk8s.kubectl delete service selenium-hub
microk8s.kubectl delete deployment selenium-node-chrome
microk8s.kubectl delete deployment selenium-node-firefox
microk8s.kubectl delete deployment selenium-hub
```
